When trying to upgrade manually with rpm, I get this slightly more helpful message:

Preparing packages for installation...

foreman-1.5.0-0.2.RC2.el6

warning: /etc/cron.d/foreman saved as /etc/cron.d/foreman.rpmsave

warning: /etc/foreman/settings.yaml created as /etc/foreman/settings.yaml.rpmnew

error: unpacking of archive failed on file /usr/share/foreman/config/settings.plugins.d: cpio: rename failed - Is a directory

Moving/deleting the /usr/share/foreman/config/settings.plugins.d directory made the update complete successfully.

#3 - 05/02/2014 07:56 AM - Dominic Cleal

As a workaround, move the contents of /usr/share/foreman/config/settings.plugins.d to a temporary directory before upgrading and then move them back to /etc/foreman/plugins/ after. We might be able to write a lua %pretrans script, but I'll otherwise document it in the upgrade notes.

#4 - 05/02/2014 08:15 AM - Dominic Cleal

- Related to Feature #4197: Foreman package should handle creation of plugin directories added

#5 - 05/07/2014 02:34 PM - Dominic Cleal

I've documented this in the upgrade instructions, sorry we haven't been able to address this via the spec file in time for 1.5.0.
