Description I had step by step installed the various plugins maintaining a controlled working environment. Up to the point that I installed plugin GEC and then proxy threw a error 500 Attached are the web server output and console output of the installer.		

History

#1 - 05/01/2014 07:04 AM - Dominic Cleal

- Project changed from Foreman to Packaging
- Subject changed from failure when installing GEC plugin with 1.5 rc2 to failure when installing GCE plugin with 1.5 rc2

#2 - 05/01/2014 10:51 AM - Greg Sutcliffe

I can't reproduce this, I'm afraid:

```
$ DEBUG=1 apt-get install foreman-gce
...
Setting up foreman-gce (1.5.0~rc2-1) ...
$ curl -s -k -u admin:changeme https://localhost/about|grep -i -A1 gce
      <td>GCE</td>
      <td><div class="label label-success">Installed</div></td>
;
```

Which OS are you working on? I tested on Wheezy...

#3 - 05/01/2014 12:49 PM - Jelle B.

Wheezy , and I was using the foreman-installer step by step , so first do the base install foreman , proxy , puppet

then follow up plugin for plugin.

Just realised the package is installed , BUT :
[ERROR 2014-04-25 06:37:25 verbose] /Stage[main]/Foreman_proxy::Register/Foreman_smartproxy[test-foreman.lab2.sys.ecotel.lan]: Could not evaluate: 500 Internal Server Error

Here is my menu showing all that is enabled.

- Main Config Menu
- 1. ☐ Configure foreman
 - 2. ☐ Configure foreman_proxy
 - 3. ☐ Configure puppet
 - 4. ☐ Configure foreman_plugin_bootdisk
 - 5. ☐ Configure foreman_plugin_chef
 - 6. ☐ Configure foreman_plugin_default_hostgroup
 - 7. ☐ Configure foreman_plugin_discovery
 - 8. ☐ Configure foreman_plugin_hooks
 - 9. ☐ Configure foreman_plugin_puppetdb
 - 10. ☐ Configure foreman_plugin_setup
 - 11. ☐ Configure foreman_plugin_templates
 - 12. ☐ Configure foreman_compute_ec2

- 13. [] Configure foreman_compute_gce
- 14. [] Configure foreman_compute_libvirt
- 15. [] Configure foreman_compute_openstack
- 16. [] Configure foreman_compute_ovirt
- 17. [] Configure foreman_compute_rackspace
- 18. [] Configure foreman_compute_vmware
- 19. Display current config

Is it maybe an installer issue ?

Apache passenger complaints about a missing gem :
Could not find gem 'google-api-client (>= 0) ruby' in the gems available on this machine. (Bundler::GemNotFound)

#4 - 04/23/2016 02:14 PM - Anonymous

- Status changed from New to Resolved

I'm quite sure this is not reproducible anymore.
