Description	
I had step by step installed the various plugins maintaining a controlled working environment. Up to the point that I installed plugin GEC and then proxy threw a error 500	
Attached are the web server output and console output of the installer.	

History

#1 - 05/01/2014 07:04 AM - Dominic Cleal

- Project changed from Foreman to Packaging

- Subject changed from failure when installing GEC plugin with 1.5 rc2 to failure when installing GCE plugin with 1.5 rc2

#2 - 05/01/2014 10:51 AM - Greg Sutcliffe

I can't reproduce this, I'm afraid:

```
$ DEBUG=1 apt-get install foreman-gce
...
Setting up foreman-gce (1.5.0~rc2-1) ...
$ curl -s -k -u admin:changeme https://localhost/about|grep -i -A1 gce
    <td>GCE</td>
    <td></td></div class="label label-success">Installed</div></td>
;
```

Which OS are you working on? I tested on Wheezy...

#3 - 05/01/2014 12:49 PM - Jelle B.

Wheezy , and I was using the foreman-installer step by step , so first do the base install foreman , proxy , puppet

then follow up plugin for plugin.

Just realised the package is installed , BUT :

```
[ERROR 2014-04-25 06:37:25 verbose] /Stage[main]/Foreman_proxy::Register/Foreman_smartproxy[test-foreman.lab2.sys.ecotel.lan]: Could not evaluate: 500 Internal Server Error
```

Here is my menu showing all that is enabled.

Main Config Menu

- Configure foreman
- Configure foreman_proxy
- Configure puppet
- Configure foreman_plugin_bootdisk
- Configure foreman_plugin_chef
- Configure foreman_plugin_default_hostgroup
- Configure foreman_plugin_discovery
- Configure foreman_plugin_hooks
- Configure foreman_plugin_puppetdb
- Configure foreman_plugin_setup
- Configure foreman_plugin_templates
- Configure foreman_compute_ec2

13. [] Configure foreman_compute_gce
14. [] Configure foreman_compute_libvirt
15. [] Configure foreman_compute_openstack
16. [] Configure foreman_compute_ovirt
17. [] Configure foreman_compute_rackspace
18. [] Configure foreman_compute_vmware
19. Display current config

Is it maybe an installer issue ?

Apache passenger complaints about a missing gem :

Could not find gem 'google-api-client (>= 0) ruby' in the gems available on this machine. (Bundler::GemNotFound)

#4 - 04/23/2016 02:14 PM - Anonymous

- Status changed from New to Resolved

I'm quite sure this is not reproducible anymore.
