Description	
<p>foreman_setup ships assets (well, one small piece of javascript) so this requires compilation for use in production mode. The RPM currently does this at build time (foreman is a BuildRequires), but the Debian package should try doing this too - even though it's not exactly shipping the plugin itself.</p> <p>The foreman_setup RPM ships the following files:</p> <pre>/opt/rh/ruby193/root/usr/share/gems/gems/foreman_setup-2.0.3/public /opt/rh/ruby193/root/usr/share/gems/gems/foreman_setup-2.0.3/public/assets /opt/rh/ruby193/root/usr/share/gems/gems/foreman_setup-2.0.3/public/assets/foreman_setup /opt/rh/ruby193/root/usr/share/gems/gems/foreman_setup-2.0.3/public/assets/foreman_setup/provisioner-136a7e29cf64723a3ed46faa12c90324.js /opt/rh/ruby193/root/usr/share/gems/gems/foreman_setup-2.0.3/public/assets/foreman_setup/provisioner-136a7e29cf64723a3ed46faa12c90324.js.gz /opt/rh/ruby193/root/usr/share/gems/gems/foreman_setup-2.0.3/public/assets/foreman_setup/provisioner.js /opt/rh/ruby193/root/usr/share/gems/gems/foreman_setup-2.0.3/public/assets/foreman_setup/provisioner.js.gz /opt/rh/ruby193/root/usr/share/gems/gems/foreman_setup-2.0.3/public/assets/setup /opt/rh/ruby193/root/usr/share/gems/gems/foreman_setup-2.0.3/public/assets/setup/manifest.yml</pre>

- Status changed from New to Rejected

The JS is now inlined, so this problem doesn't occur, but it'd be useful to know how to do it in Debian packages.
