Revision 5dfda340 - 06/16/2014 05:04 PM - dustin tsang

Fixes #5555 - fix org update action's apipie param

In the OrganizationController v2 update action, the param_group resource contained hash named resource. This was not substituted for organization. As a result hammer-cli-katello, through api-bindings, was incorrectly expecting and passing resource instead

of organization to the update action. Subsequently no organizations were being updated.

The param_group was redefined on the update action so that the param hash could have the correct name, :organization.
