Bugzilla link:	Red Hat JIRA:
Pull request:	
Description	
After a fresh installation and without touching the web server in any way, I attempted to register a system.	
Output from console including error:	
<pre>[root@rhel ~]# subscription-manager register --org "ACME_Corporation" --force Username: admin Password: At least one activation key must have a lifecycle environment and content view assigned to it</pre>	

History

#1 - 06/04/2014 08:08 PM - Eric Helms

- Status changed from New to Closed
- Triaged changed from No to Yes

Tested and this is no longer an issue when trying to register with just organization. The server replies with a proper error message to guide the user.
