Description

Successfully installed puppet master and agent in ubuntu 12.04. Trying to install Foreman (1.4.2-1) following manuals from foreman.org. Could not locate a file "generate_answers.rb"
Try to run the installer with the command "ruby /usr/share/foreman-installer/generate_answers.rb" but generate_answers.rb is missing in my ubuntu. I tried find command and locate command but still could not find the file. Any suggestions? Thanks.

- Status changed from New to Rejected

I think you hit upon documentation for an older version. Here's the quickstart guide for Foreman 1.4, which uses the simpler "foreman-installer" command as a replacement.

http://theforeman.org/manuals/1.4/quickstart_guide.html

Hope that helps.
