To summarize the discussion so far on the PR:

> 2) I think it would be safe to use the -updates version per default. But we would need to check > if there really is one for this release.

I agree. I think we want to enable specifying this kind of data on the Medium, or possibly even on the OS model. Do you want to have a go at this (we can assist if you drop into IRC), or would prefer to leave it to someone else?

I'm a +1 for the suggested changes in the PR. I'll take a look at implementing.

Closing as won't fix for the reasons specified in the PR, this can be done by changing the release name to precise-updates, saucy-updates, etc... on the Operating System.

Users can create an specific OS for precise and precise-updates and have the updated images without any patch.
