Description	
<p>Hi fellow Rubyists,</p> <p>I saw methods defined directly in included block when using Concern several times.</p> <pre>module AModule extend ActiveSupport::Concern included do # this is BAD def a_method end end end end</pre> <p>It is a bad practice and it breaks things, all instance methods should go to the AModule, and all class methods to a ClassMethods module.</p> <ul style="list-style-type: none">- It dynamically creates methods in each class, they are not shared through module, it is slow.- It cannot be accessed for extension, there is no module to include to.- it breaks `super` calls. <p>We should avoid using this and go for:</p> <pre>module AModule extend ActiveSupport::Concern included do # e.g. has_one :user end module ClassMethods def a_method end end end end</pre> <p>Thanks.</p> <p>I'll create issue to remove these bad definitions.</p> <p>Petr</p>
