Description

I just changed my provisioning template but the pxelinux.cfg of the hosts that use this provisioning template don't get updated.

After changing the Operating System to something different (ie Centos), saving and changing it back to the OS i want will trigger a fresh pxelinux.cfg.

Thanks for the report, we're tracking this under #2267. Another way you can refresh the TFTP menu is to turn the build mode off then on again using the Cancel Build button on the host page.
