

Foreman - Feature #5784

as an admin, I would like to know whats foreman health/status

05/19/2014 08:51 AM - Ohad Levy

|   |        |                                    |
|---|--------|------------------------------------|
| <b>Status:</b>  | New    |                                    |
| <b>Priority:</b>  | Normal |                                    |
| <b>Assignee:</b>  |        |                                    |
| <b>Category:</b>  |        |                                    |
| <b>Target version:</b>  |        |                                    |
| <b>Difficulty:</b>  |        |                                    |
| <b>Triaged:</b>   |        |                                    |
| <b>Bugzilla link:</b>   |        |                                    |
| <b>Pull request:</b>  |        |                                    |
| <b>Description</b>  |        |                                    |
| It would be nice to have a summary page with all subsystems, etc, this would allow an admin to know if all systems are operational, or something needs to be looked into. |        |                                    |
| i could see this tap into a monitoring system down the road / dashboard of foreman health via a relevant API.   |        |                                    |

History

#1 - 09/14/2015 09:53 AM - Stephen Benjamin

- Related to Feature #11798: Standard smart proxy interface for module statuses added

#2 - 12/10/2015 10:57 AM - Dominic Cleal

- Has duplicate Feature #12679: Health screen added

#3 - 01/21/2016 11:19 AM - Marek Hulán

just adding information from duplicate ticket

a few ideas

- move all system ping tests (proxies, compute resources, db response time etc) to this page
- provide a notification area in case the system detect failures of sort (e.g. something failed earlier, and identified as a configuration error etc, the error might be logged and acked on this page).
- provide a place to let the user some components are not configured (e.g. trend counters etc)
- allow plugins to extend as needed.

some ideas can be reused from [https://github.com/boogiespook/sat6\\_healthCheck/blob/master/sat6\\_healthCheck.sh](https://github.com/boogiespook/sat6_healthCheck/blob/master/sat6_healthCheck.sh)
