

Katello - Bug #5860

updating an activationkey name to more than 255 char neither updates the name nor raises any validation error

05/21/2014 06:11 PM - Thomas McKay

Status:	Closed	
Priority:	Normal	
Assignee:	Thomas McKay

Pull request:		

Description

Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1083875

Description of problem:

I was trying to update the activation-key(ak) name, so I tried this scenario:

1. create a ak with name 'test'
2. update its name to greater than 255 characters
3. when you save, name will be updated
4. now navigate away from activation-key page and then come back. The name will still be 'test'

How reproducible:
always

Steps to Reproduce:

1. create a ak with name 'test'
2. update its name to greater than 255 characters
3. when you save, name will be updated
4. now navigate away from activation-key page and then come back. The name will still be 'test'

Actual results:

I can update name of activation which has more than 255 characters

Expected results:

UI should raise validation error.
