

Foreman - Bug #5897

Missing user mail address should not be required for admin updating a user

05/23/2014 07:22 AM - Dominic Cleal

Status: Closed	
Priority: Normal	
Assignee: Tom Caspy	
Category: Authentication	
Target version: 1.10.0	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases:
Bugzilla link: 1099988	Red Hat JIRA:
Pull request: https://github.com/theforeman/foreman/pull/2244	
Description Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1099988 Description of problem: When creating a user the --mail option is not required but when updating it is. Version-Release number of selected component (if applicable): hammer (0.1.0) * hammer_cli_foreman (0.1.0) * hammer_cli_katello (0.0.3) How reproducible: Always Steps to Reproduce: 1. # hammer user create --login testuser --password userpasswd --auth-source-id 1 User created 2. # hammer user list --per-page 10000 grep testuser 48 testuser 3. # hammer user update --id 48 --login usertest Could not update the user: Email address can't be blank 4. # hammer user update --id 48 --login usertest --mail test@user.com User updated 5. # hammer user list --per-page 10000 grep "48 " 48 usertest test@user.com Actual results: Expected results: If the --mail is required on creation then should ensure that it is filled on update. But if it is not required on creation it should be not required when updating. Additional info:

Revision 564b322f - 07/20/2015 10:28 AM - Tom Caspy

fixes #5897 - when user doesn't have an email, email isn't required

History

This is currently by design, so an admin can create a user without an e-mail address and they're forced to update it on their first login. I'm not sure

that's a great design though and would prefer to simply make it optional. Thoughts?

proposed solution - user's auth source defaults to requiring email. in case of hidden, external and LDAP auth sources, they allow blank emails. creating pull request.

Not a bug in my opinion, only users that have never logged in the UI can be in the db without a password, as soon as they log in they have to set one.

#5 - 01/26/2015 06:28 AM - Dominic Cleal

There are two parts to this, in my opinion.

The bug here is that an admin who creates a user without an e-mail address then updates it before the user has logged in, shouldn't be required to provide the e-mail address on update. I think this is valid.

The design issue of forcing a user to set their e-mail address on login is perhaps a separate issue, but I thought when filing this that if we fixed the design, we might eliminate the bug above. My view on the design is that we should perhaps simply have the e-mail address as an optional field and not force anybody to set it - or have it required, but that'd introduce issues with certain auth sources.
