

Katello - Bug #5931

CDN path verification should handle redirects

05/26/2014 02:56 PM - Ivan Necas

Status: Closed	
Priority: Normal	
Assignee:	
Category: Web UI	
Target version: Katello 2.0	
Difficulty:	Fixed in Releases:
Triaged: Yes	Found in Releases:
Bugzilla link: 1099221	Red Hat JIRA:
Pull request:	
Description	
Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1099221	
Description of problem: Currently the <code>cdn_var_substitutor#valid_substitutions?</code> treats 301 redirects as an error. In some cases it will try to fetch <code>\$REPO_URL/repodata</code> which causes a redirect to <code>\$REPO_URL/repodata/</code> . One solution is to have it request <code>\$REPO_URL/repodata/repomd.xml</code> , but i would argue it should just follow redirects as well.	
Version-Release number of selected component (if applicable): katello-1.5.0-22.el6sat.noarch katello-ca-1.0-1.noarch katello-certs-tools-1.5.5-1.el6sat.noarch katello-installer-0.0.37-1.el6sat.noarch pulp-katello-plugins-0.2-1.el6sat.noarch ruby193-rubygem-katello-1.5.0-40.el6sat.noarch rubygem-hammer_cli_katello-0.0.3-22.el6sat.noarch	
How reproducible: 100%	
Steps to Reproduce: (1. Change the CDN URL to a local mirror) 2. Visit the Red Hat Repositories page 3. Try to select/enable a repository	
Actual results: Back-end errors	
Expected results: Repo should become enabled
