Katello - Bug #5949

deleting org in UI does not delete corresponding lifecycle environments causing rake katello:reindex to fail

05/27/2014 04:35 PM - Thomas McKay

Pull request:			

Description

After deleting ACME_Corporation from my server through the UI, apparently successfully, a later call to 'rake katello:reindex' failed. Looking at the psql database I see there was still a Library environment in katello_environments table for ACME.

Unclear if other org-dependent objects are also orphaned.

Found the problem. The good news is that other records like product are not getting orphaned. I have not looked at all records but at least there are some that aren't getting orphaned.

The bad news is that the organization destroy code (https://github.com/Katello/katello/blob/master/app/models/katello/organization_destroyer.rb) was never reimplemented for the engine. That's probably going to have to be implemented at some point (hopefully with dynflow). I may have to implement that here.
