Foreman - Bug #6000

on 1.5 hosts build on compute resources remain in "building" indefinitely

Description

It seems that in the latest release of Foreman, machines are not moved from building state.

We have this in our cloud-init:

phone_home:
url: <%= foreman_url('built') %>

The URL is accessed at the end (we can see this in the foreman logs), but the host is never moved to "built" state.

Please let me know if you need any logs from our side.

Can you try making this change to your cloud-init template?
