

Katello - Bug #6008

Capsule: Puppet content doesn't appear to be published to /etc/puppet/environments on capsule

06/02/2014 11:54 AM - Ivan Necas

Status: Closed	
Priority: Normal	
Assignee: Ivan Necas	
Category: Foreman Proxy Content	
Target version: Katello 2.0	
Difficulty:	Fixed in Releases:
Triaged: Yes	Found in Releases:
Bugzilla link: 1103277	Red Hat JIRA:
Pull request:	
Description	
Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1103277	
Description of problem:	
When content is synced from Satellite 6 to Capsule, it doesn't appear that the puppet content from the Satellite is making its way to the Capsule (i.e. /etc/puppet/environments)	
Version-Release number of selected component (if applicable): katello-1.5.0-25.el6sat.noarch	
How reproducible: always	
Steps to Reproduce:	
1. install/configure sat6	
2. install/configure capsule (in my case, it is on a separate machine from the sat6)	
on the sat6 server:	
3. sync some rhel content (e.g. 6Server)	
4. create a custom repo and import some puppet modules	
5. create a content view	
6. add the content from 3 & 4 to the content view	
7. publish a content view version	
8. associate the capsule (from 2) with the Library using the cli, e.g. capsule content add-lifecycle-environment --id 4 --environment-id 1	
9. sync the content to the capsule, e.g. capsule content synchronize --id 4	
Actual results:	
Satellite 6: /etc/puppet/environments has content (e.g. KT_ACME_Corporation_Library_WordPress_Application_3)	
Capsule: /etc/puppet/environments is empty	
Expected results:	
Capsule: /etc/puppet/environments should have the same environments that were in
