

Foreman - Bug #6017

Handle Openstack images with "nil" name gracefully

06/02/2014 04:11 PM - Greg Sutcliffe

Status:	New	Fixed in Releases: Found in Releases: 1.5.0 Red Hat JIRA:
Priority:	Low	
Assignee:		
Category:	Compute resources - OpenStack	
Target version:		
Difficulty:	easy	
Triaged:		
Bugzilla link:		
Pull request:		
Description Apparently if you use `glance image-create` with no options while playing around, it will actually create an image with a name of `nil`. This means when the sort function in <code>=app/helpers/image_helper:6=</code> tries to call <code>`downcase`</code> it bombs out. We should wrap this, and discard images whose name == nil.
