Description

On the new user group form, when adding an external user group to it under the external groups tab, if validation of the new external group fails and it has to re-render the form to show an error, you get a routing error.

1. Set up LDAP auth (assuming [#813](#) was merged)
2. Go to new user group, enter a name
3. Click add external user group, enter an unknown/invalid name
4. Click submit

```

```

It's trying to render a line in the external user groups list with a link to the refresh route, even though it didn't save correctly.

Ack, this is actually introduced in [#813](#), my bad.
