Description

It would be great that foreman allowed override puppet classes params and global params with variables like $hostname, $fqdn, etc. And then pass them as is to puppet instead of as strings with its names.

History

#1 - 06/05/2014 07:04 AM - Dominic Cleal

- Status changed from New to Feedback

#2260 added support to use ERB inside class parameter values, including overrides. You should be able to use it in a similar way to templates (see TemplateWriting) and use <%= @host.name %> <%= @host.shortname %> etc.

#2 - 05/17/2017 08:47 AM - Anonymous

- Status changed from Feedback to Resolved

should be resolved by now
