

Katello - Bug #6133

katello-configure does not set proxy for pulp puppet importer

06/09/2014 10:43 PM - Eric Helms

Status: Closed	
Priority: Normal	
Assignee: Eric Helms	
Category: Installer	
Target version: Katello 2.0	
Difficulty: easy	Fixed in Releases:
Triaged: Yes	Found in Releases:
Bugzilla link: 1031161	Red Hat JIRA:
Pull request:	
Description	
Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1031161	
Description of problem:	
When specifying a proxy with katello-configure, it correctly sets a proxy for yum_importer.json but no proxy configuration is saved for puppet. Thus preventing importing puppetforge when running behind a proxy.	
Version-Release number of selected component (if applicable): Satellite 6.0.2 (MDP2), but also found in in latest upstream in Katello Git repo	
How reproducible: katello-configure --proxy-url=http://some.http.proxy --proxy-port=8080 /etc/pulp/server/plugins.conf.d/puppet_importer.json does not exist and sync with puppetforge fails	
Steps to Reproduce:	
1. katello-configure --proxy-url=http://some.http.proxy --proxy-port=8080	
2. Run puppetforge repo sync	
3. After a period, nectar will timeout and sync will fail	
Actual results: Puppet repo sync failure	
Expected results: Puppet Forge modules to be synced
