Pull request:			

Description

Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1085494
Description of problem:
snap6 compose 2

When you are looking at a repo of puppet modules and click the number of modules (eg: 2), you are taken to the content search page. However, it is not automatically set up to search puppet modules. You have to manually select the puppet dropdown and then hit search.

Expected results:
When clicking the link, you should be taken to a page that has already performed the search.
