 - rubygem-hammer_cli_katello-0.0.3-22.el6sat.noarch
- How reproducible:
always

Steps to Reproduce:

on server: =====

1. create gpgkey with:
<http://inecas.fedorapeople.org/fakerepos/zoo/RPM-GPG-KEY-dummy-packages-generator>
2. create a product/repo with url and provide above created key name
<http://inecas.fedorapeople.org/fakerepos/zoo/>
3. create a cv and add the product and publish it to 'Library'

on client: =====

1. register client with cmd:
subscription-manager register --username admin --password changeme --env Library
2. subscribe the client to custom product
subscription-manager subscribe --pool <pool-id>
3. yum repolist

Actual results:

GPG key retrieval failed: [Errno 14] PYCURL ERROR 22 - "The requested URL returned error: 404 Not Found"

Expected results:

gpg-key should be retrieved

Additional info:

If I manually install key on client with rpm --import <keyname> then package install is successful..so it means key is correct.

Also, redhat.repo is populated with repo name as below:

```
[ACME_Corporation_custom_fake_zoo3]
name = zoo3
baseurl = https://dhcp201-170.englab.pnq.redhat.com/pulp/repos/ACME\_Corporation/Library/custom/custom\_fake/zoo3
enabled = 1
gpgcheck = 1
gpgkey = https://dhcp201-170.englab.pnq.redhat.com/katello/katello/api/repositories/56/gpg\_key\_content
sslverify = 1
sslcacert = /etc/rhsm/ca/candlepin-local.pem
sslclicentkey = /etc/pki/entitlement/3399980321529909903-key.pem
sslclicentcert = /etc/pki/entitlement/3399980321529909903.pem
```

Associated revisions

Revision 76f9cace - 06/17/2014 03:38 PM - Brad Buckingham

fixes #6204 / BZ 1099016 - Fix gpg key on repo create and yum retrieval

This commit addresses 2 issues:

1. update the repo create to support associating the gpg key url in candlepin
2. update the v2 api to expose the 'gpg_key_content' api to enable yum clients to retrieve the key
