How reproducible: Always	
Steps to Reproduce: There may be more, but these are the ones which I encountered:	

1. hammer activation-key create --content-view='cv1' --organization-id='1'

Could not create the activation key:

Validation failed: Label can't be blank, Label can't be blank, Name cannot be blank, Name can't be blank

1. hammer activation-key create --content-view='cv1' --organization-id='1' --name='ak1234' --description='ak1234'  
--environment-id=1

Could not create the activation key:

Validation failed: Label has already been taken, Name has already been taken

Actual results:

Label is still referred in error messages

Expected results:

Label is not exposed to user anymore so should not be part of any error messages
