| <b>Description</b>  |              |  |
| When I make a API call like this<br>api/v2/hostgroups/HOSTGROUP/smart_class_parameters  |              |  |
| it lists all the smart class variables but doesn't show up the override values which has been set. It only displays the default values. |              |  |
