

Katello - Refactor #6304

Reconsider `apply_default_info` code

06/20/2014 07:58 AM - Ivan Necas

Description	
After making the V1 controllers obsolete, the code around applying default info to the organization got more or less unreachable	
https://github.com/Katello/katello/blob/22db6d7770819282ef00d08cf74e36e0a13dc861/app/models/katello/concerns/organization_extensions.rb#L215-L231	
Since it uses the delayed jobs for the async work, it should either be removed and rewritten to Dynflow or just removed (in case we don't plan to provide this functionality later)

Fixes #6304 - remove apply default info

As the feature is not reachable by the current UI/API and CLI and there are no recent plans for enabling this feature again (probably the foreman facts might be used instead), I'm removing the apply default info to all hosts, as it's one of the last parts of the code-base using delayed jobs and investing time to rewriting this to Dynflow is not effective.

- *Status changed from New to Assigned*

I went thought he code, ui and api and the code for applying the default info to hosts and as it is now, it's not reachable. Also, the foreman facts should probably be considered as replacement for the system custom info. As this one of the last async tasks using the delayed jobs, I'm removing the old code, and posponing the re-implementation (if any) to later stages.
