Pull request:	https://github.com/theforeman/foreman/pull/1549	

Description

Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1112750

++ This bug was initially created as a clone of Bug #1112182 ++

Description of problem:

I created a simple user in "Any context" mode and did not assign any location, org and roles. But following menus are visible to that user.

Ideally user shouldn't be allowed to have access to any of menu items without any permission. Hosts menu shows "All Hosts" and user can see the created hosts.

Version-Release number of selected component (if applicable):

sat6 beta snap10 compose2

How reproducible:

always

Steps to Reproduce:

1. Login with admin user
2. create a user in "Any context" and do not assign location and org
3. logout with admin user and login with newly created user

Actual results:

User can see Hosts --> All hosts

Expected results:

user shouldn't be allowed to have access to any of menu items without any permission

History

#1 - 06/24/2014 03:46 PM - Dominic Cleal

- Category set to Authentication

Not really "any permission", but all users automatically get the "Anonymous" role added. By default the anonymous role (a terrible name in itself, see [#994](#)) grants an unlimited view_hosts permission. This confuses a lot of people and should be removed by default IMHO.
