Pull request: https://github.com/foreman/foreman/pull/3869	
Description Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1104822 Upon login using an 'external' user. The user cannot do anything. I've even attempted to specify an external group, but there is no context/location settings in the external group settings.

Revision 4db325b0 - 09/27/2016 03:04 AM - Daniel Lobato Garcia

Fixes #6372 - User inherits taxonomies from LDAP on creation

In an installation that uses taxonomies, when an user logs in for the first time and gets its account created via LDAP, it has no taxonomies.

This is a problem, as even if the user has all the roles it needs from external user groups, an admin needs to manually set the taxonomies for every new user.

This commit fixes that by assigning the taxonomies from the LDAP auth source to the user when it logs in for the first time. It does **not** update them on every login, as after the user has logged in, user taxonomies are left to the Foreman administrator to manage.

History

#1 - 06/25/2014 07:44 AM - Dominic Cleal

- Tracker changed from Bug to Feature
- Category set to Organizations and Locations
