Description	
Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1113012	
Description of problem:	
I was trying to create a new host, and I selected the hostgroup from dropdown. Later I unselected the hostgroup by selecting a empty row there and then Firebug raises error:	
"NetworkError: 404 Not Found - https://dhcp207-190.lab.eng.pnq.redhat.com/hosts/process_hostgroup "	
Version-Release number of selected component (if applicable): sat6 beta snap10 compose3	
How reproducible: always	
Steps to Reproduce:	
1. create a hostgroup 2. while creating new host, select hostgroup from down and then unselect it by selecting empty row from drop down 3.	
Actual results:	
Expected results: no error should be raised on selecting empty row to unselect the previous selection	
Additional info: log from production.log:

The 404's the correct response, but maybe there should be a simple error handler on the AJAX call.
