Foreman - Bug #6380

VM not created when resubmitting new host form after orchestration failure

06/25/2014 11:46 AM - Dominic Cleal

Pull request:			

Description

0. Stage some sort of failure during TFTP orchestration (maybe set :tftproot to a bad path in the proxy & restart it)
1. Try creating a new host on a compute resource, which should fail due to TFTP orchestration
2. The new host form reappears with the orchestration error
3. Resubmit the form and the VM is no longer created

(another similar scenario in bug #6379)

What appears to happen is that the form reloads, but without the VM tab. Next time the form is submitted, no compute_attributes are sent and so the VM isn't recreated.

Note, this then triggers further errors as the host record has compute_resource_id set, but uuid is nil. Some parts of Foreman just check for compute_resource_id.present? to see if it's a CR-associated host, and since the UUID's invalid, things like the power state AJAX fail.

I seems I'm hitting this bug also, actually I come from #5859

Is there some temp fix for this ? It's coming up randomly.
