Description of problem:	
The attached screenshot shows that if you have a lifecycle-environment with a really long name (128 characters) and try to promote an existing content view to it, the table that displays the information for the promoted content view is overtaken by the lifecycle-environment name (as in the values for other columns are covered by the name).

How reproducible:

Steps to Reproduce:

1. Create a new lifecycle-environment with a name that has 128 characters
2. Promote a content view to this lifecycle-environment using the UI
- 3.

Actual results:

The table that displays information about the content view is mostly covered with the name of the environment (see screenshot)

Expected results:

I can reproduce this - with long lifecycle environment names without spaces. The solution is to add word-wrap: break-word to the td, but I'm not sure where in the RCUE CSS to add this.
