That version of ruby193-ruby is an alpha build of RHSCL, please ensure you use the current RHSCL 1.0 or 1.1 versions available with RHEL.

#2 - 06/30/2014 08:48 AM - Sven Milinski

Hello,

thanks for the fast reply... this issue is a little bit tricky... because the package ruby193-ruby comes from your repo:

=> "conflicts with file from package ruby193-ruby-1.9.3.327-29.el6.x86_64"

yum info ruby193-ruby-1.9.3.327-29.el6.x86_64
Name   : ruby193-ruby
Arch   : x86_64
Version   : 1.9.3.327
Release   : 29.el6
Size   : 71 k
Repo   : installed
From repo : **rhel-x86_64-foreman-stable-server-6** (this is our name for your repository)
Summary   : An interpreter of object-oriented scripting language
URL   : http://ruby-lang.org/
License   : (Ruby or BSD) and Public Domain
Description : Ruby is the interpreted scripting language for quick and easy
: object-oriented programming. It has many features to process text
: files and to do system management tasks (as in Perl). It is simple,
: straight-forward, and extensible.

I've tried to use the RHSCL in version 1.0 - but the same error occurred

#3 - 06/30/2014 08:52 AM - Dominic Cleal

Our Foreman 1.2 and 1.3 repositories used to ship this package, back before RHSCL was released. If you're installing Foreman 1.4 or higher, then you shouldn't use it. Instead, you should enable RHSCL (Red Hat Software Collections, more info in the [pre-reqs](#)), one of the Red Hat repositories.

RHSCL 1.0 should provide you with a newer package, circa 1.9.3.448.

#4 - 06/30/2014 10:39 AM - Sven Milinski

Thanks - that was a good help..

our problem was that all repositories was in one channel...

Ticket can be closed - thanks for the support !
