<p>It would be nice to be able to filter by request url since we don't want to filter out the param from being logged across the entire application.</p>

fixes #6441 - allows filtering of parameters per controller

There is an issue where certain parameters for particular controllers are causing the log to fill up. This allows the ability to filter parameters by controller.

This allows each controller to add additional parameters to filter. In a controller, to filter parameters name and description, you can add the following:

```
include Foreman::Controller::FilterParameters
filter_parameters :name, :description
```
