<b>Description</b>	
Foreman 1.5 brought almost complete external authentication support. However, configuring the environment (packages, Apache modules, sssd, keytab) is manual process with many steps:  <a href="http://theforeman.org/manuals/1.5/index.html#5.7ExternalAuthentication">http://theforeman.org/manuals/1.5/index.html#5.7ExternalAuthentication</a>	
The foreman-installer should make it easy to enable the external authentication via FreeIPA with few command-line options.
