Katello - Bug #6460

Calling repository destroy or product destroy makes a call to Candlepin

07/01/2014 01:48 PM - David Davis

Status:	Closed		
Priority:	Normal		
Assignee:	David Davis		
Category:	Orchestration		
Target version:	Katello 2.0		
Difficulty:	easy	**Fixed in Releases:**	
Triaged:	Yes	**Found in Releases:**	
Bugzilla link:	1115553	**Red Hat JIRA:**	
Pull request:			

Description

It looks like there is a hook we forgot to remove when we dynflowed product/repo destroy. Here's the error:

```
VCR::Errors::UnhandledHTTPRequestError:

================================================================================
An HTTP request has been made that VCR does not know how to handle:
  GET https://localhost:8443/candlepin/environments/2

There is currently no cassette in use. There are a few ways
you can configure VCR to handle this request:

  * If you're surprised VCR is raising this error
    and want insight about how VCR attempted to handle the request,
    you can use the debug_logger configuration option to log more details [1].
  * If you want VCR to record this request and play it back during future test
    runs, you should wrap your test (or this portion of your test) in a
    `VCR.use_cassette` block [2].
  * If you only want VCR to handle requests made while a cassette is in use,
    configure `allow_http_connections_when_no_cassette = true`. VCR will
    ignore this request since it is made when there is no cassette [3].
  * If you want VCR to ignore this request (and others like it), you can
    set an `ignore_request` callback [4].
