Bugzilla link: 1125356	Red Hat JIRA:
Pull request: https://github.com/Katello/katello-installer/pull/87	
Description	
I know this is intentional, but it does bad things. For example, it destroys any FreeIPA server, by wiping out it's configuration.

Revision 67804f9b - 07/28/2014 08:25 AM - Stephen Benjamin

fixes #6491 - fail pulp node installation when freeipa present

If you try to install a pulp node on a machine that has FreeIPA server installed, we'll wipe out the httpd configuration. This prevents pulp from being installed in that case.

History

#1 - 07/07/2014 04:19 AM - Dominic Cleal

- Project changed from Foreman to Installer

- Category changed from Smart Proxy to Foreman modules

I don't think the foreman_proxy module will touch Apache, only foreman or puppet modules.

#2 - 07/07/2014 04:49 AM - Ewoud Kohl van Wijngaarden

No, only foreman and puppet use the puppetlabs-apache module. foreman_proxy was somewhere on my list to (optionally) support passenger deployments as well, but never got around to it.

Ah, OK, you're right, I forget proxy is WebBrick.

It's in Katello capsule-installer then... maybe the pulp stuff. Needs investigation.
