<b>Pull request:</b> <a href="https://github.com/Katello/katello-installer/pull/84">https://github.com/Katello/katello-installer/pull/84</a>	
<b>Description</b>	
Cloned from <a href="https://bugzilla.redhat.com/show_bug.cgi?id=1117410">https://bugzilla.redhat.com/show_bug.cgi?id=1117410</a>	
Description of problem:	
Version-Release number of selected component (if applicable): Satellite 6.0.3	
How reproducible:	
Setup: Internal network, only http(s)-Proxy allowed, Fresh install, Satellite 6 Beta prerequisites met.	
1. katello-installer --katello-proxy-url=http://myproxy --katello-proxy-port=8080	
1. Content -> Red Hat Subscriptions -> Import manifest ...	
2. Content -> Red Hat Repositories -> (random repo, I tried "Red Hat Enterprise Linux 6 Server (RPMs)") > Endless turning wheel	
3. Reloading the Red Hat Repositories site shows me that repository marked for sync.	
4. Checking sync status: Content -> Sync status actually shows me the HTTP 500 Error.	
Log file:	
> /var/log/httpd/foreman-ssl_error_ssl.log <==	
[Mon Jul 07 19:05:50 2014] [error] [client 172.23.8.1] mod_wsgi (pid=6885): Exception occurred processing WSGI script '/srv/pulp/webservices.wsgi'.

Actual results:	
Under Administer -> Content Notices you see a HTTP 500 Error.	
Expected results:	
no error

##### Revision b57e9250 - 07/08/2014 02:56 PM - Eric Helms

Fixes #6530: Ensure proxy configs work if not all values specified.

If only host or port were specified, a trailing coma resulted in the configs causing Pulp to fail to start since the JSON was considered invalid.
