fixes #6547 / BZ 1115468 - delete puppet modules from content view on repo delete

When a puppet repository is deleted (e.g. from Content -> Products), if any of the puppet modules in that repository are associated with an existing content view (via ContentViewPuppetModule), they need to be removed from the content view. This commit will do just that, providing a behavior that is consistent with when a user deletes a yum repository (i.e those repositories are removed from the content view).
