Pull request:	https://github.com/Katello/katello/pull/4413	

Description

Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1112644

Description of problem:

I was trying to manage host-collections via a normal user. I created a user and assigned all required perms. So user was able to create collection but not able to add selected content-hosts to it. Content-hosts were listed under host-collection. when I clicked add-selected, nothing happened on UI, neither the validation error raised on UI nor content-host was added to collection.

Version-Release number of selected component (if applicable):

sat6 beta snap10 compose2

How reproducible:

always

Steps to Reproduce:

1. create a role with perms as mentioned in screenshot
2. create few dummy content-host
2. assign that role to a user
3. login with user and try to add created content-hosts to host-collection

Actual results:

UI neither raised any error not add the selected hosts to host-collection

Expected results:

In any case, this situation is very confusing, because neither I get 403 forbidden message nor I was able to add hosts to host-collection.

If I'm missing any permission then a error should be raised that user is not authorized.

Revision f8c985fd - 07/09/2014 05:23 PM - Walden Raines

Fixes #6551/BZ1112644: show add/remove content hosts if user able

The permissions that show and hide the UI for adding/removing content hosts to/from a host collection were incorrect. This commit fixes those permissions.

In order to add content hosts to a host collection you must have the permission "edit_content_host" for the content host you wish to add to the host collection as well as the permission "edit_host_collection" for the host collection you are adding the content host to.

If we you to have both permissions then you would be able to gain an implicit "edit_content_hosts" for a content host by adding the content host to a host collection since you could then perform bulk actions on the content host.
