

Foreman - Bug #6566

renaming a node does not change the certname

07/10/2014 09:39 AM - David Schmitt

| Target version: 1.6.0 | |
| Difficulty: | Fixed in Releases: |
| Triaged: | Found in Releases: 1.4.2 |
| Bugzilla link: | Red Hat JIRA: |
| Pull request: https://github.com/foreman/foreman/pull/1604 | |
| Description | |
| Reproduction: | |
| <ol style="list-style-type: none">1. Create a new host with the name 'test.example.com'2. Render a provisioning template containing @host.certname. Output should contain 'test.example.com'3. provision the host (I've not checked this step, but solely creating the host does not seem enough to repro this)3. Edit the host and change the hostname to 'different.example.com'4. Render a provisioning template containing @host.certname. | |
| Expected output 'different.example.com' | |
| Actual output 'test.example.com' | |
| My specific use-case is renaming kickstartable hosts. When the certname does not change together with the hostname, this causes massive havok when trying to rebuild hosts. | |

Revision d2823e35 - 07/31/2014 11:17 AM - Aaron Stone

Fixes #6566 - renaming a node now resets the certname on provision

If use_uuid_for_certificates is true, reuse the certname UUID value.
If false, then reset the certname if it does not match the hostname.

Related to [#3222](#). Instead of zapping the certificate only if we've changed from uuid to named certificates, what if we *always* zap the certificate when we're in hostname mode? This will handle both the case described in [#3222](#) (changing from uuid to hostname) and also when renaming a machine with hostname certnames.
