<b>Description</b> At the end of the day, physical host information is just more facts - there should be a way to specify this in foreman, and visualize it in a reasonable way.  We're currently setting up <a href="http://flux.org.uk/projects/rackmonkey/">http://flux.org.uk/projects/rackmonkey/</a> for this, but there shouldn't be any reason that Foreman wouldn't do a better job.  In my ideal world, a nagios host page links to foreman where i can see its location (or vm host if its a vm) and all my support info is in one place.

I fully agree... I would like to see a plugin architecture for foreman first, where custom screens / functionality could be added.

The feature organisation/localisation went in few days ago, can you try a recent version (daily rpm/deb) and see if it matches your problem?

##### #3 - 12/06/2012 07:55 PM - Dis Connect

Unfortunately I'm not at a company with a puppet/foreman infrastructure anymore so I can't test.

##### #4 - 12/07/2012 03:53 AM - Benjamin Papillon

I checked a little rackmonkey. I think the word "Location" does not mean the same for the Org patch and your ticket.

By location, you mean the rackmonkey way : room 4, line 2, bay 15, U 21-22

The Org patch has a more global approach :

DC Atlanta (user:joe, dnssrvn=, ntprsv=...)

DC London (user:theo, dnssrvn=, ntprsv=...)

I won't close this feature request as the provided solution does not match your need.

Too bad you don't work with foreman anymore!
