Description of problem: When editing a location, buttons for cancel and submit are drawn within the box (users/capsules/subnets/etc) It looks like you are saving configuration for users/capsules/etc instead of saving information for the full location	
Version-Release number of selected component (if applicable):	
How reproducible: Always	
Steps to Reproduce: 1. 2. 3.	
Actual results: Location of submit and cancel button is within boundaries of configuration	
Expected results: Location of buttons is outside of boundaries to reflect that you are saving complete location and you can move between elements without saving
