Pull request:	
Description	
It would be great to have audit messages whenever a smart parameter override is edited with: <ul style="list-style-type: none">• who edited• what parameter was edited• what the matcher is• what the value is If an existing parameter was edited it would be great if the old value was also listed. Auditing if the default values are changed would be great as well.

#3 - 08/18/2014 09:30 AM - Dominic Cleal

- Category set to Audit Log

- Status changed from New to Duplicate

Thanks for the bug report. I believe this has been fixed in Foreman 1.5.0 via [#1902](#).
