<b>Description</b>		
Given a large repo, such as RHEL or EPEL, I attempted to make smaller product-specific CVs with filters to get just the packages necessary to install each. These I then intended to add to a composite CV that would include a minimal base OS CV plus the product CVs w/ necessary packages.

##### Revision e5586b7e - 09/22/2016 09:33 AM - Brad Buckingham

fixes #6757 - composite view to allow duplicate repos

This commit removes the restriction that component content views added to a composite content view are not allowed to contain the same source repository. This is to handle the case where the user is managing multiple instances of the repos with different views/purposes and want to combine them through composites.

With this, when publishing a composite content view, if there are N instances of the same repository, the version published for the composite will only have 1 repository that combines them all.

This change in behavior also affects incremental update as it needs to ensure that that single repository is still a combination of all versions on the composite (e.g. from new incremental versions as well as the prior published versions).
