Description

Hi all,
I encountered some problems with the repo today, so i can't download some packages when i try to install foreman-installer.

```
"Downloading Packages:
(1/2): rubygem-little-plugger-1.1.3-17.el6.noarch.rpm
                                      |  12 kB     00:00
http://yum.theforeman.org/releases/1.5/el6/x86_64/rubygem-little-plugger-1.1.3-17.el6.noarch.rpm:
[Errno -1] Package does not match intended download. Suggestion: run yum --enablerepo=foreman clea
n metadata
Trying other mirror.
(2/2): rubygem-powerbar-1.0.11-7.el6.noarch.rpm
                                      |  12 kB     00:00
http://yum.theforeman.org/releases/1.5/el6/x86_64/rubygem-powerbar-1.0.11-7.el6.noarch.rpm: [Errno
 -1] Package does not match intended download. Suggestion: run yum --enablerepo=foreman clean meta
data
Trying other mirror.
"
```

I tried to install it on a new server and i still encountered the problem.
I tried usual things with yum problems (yum --enablerepo=foreman clean metadata, yum clean all) but problem still present.

I encountered this problem on a fresh red hat 6.5 install. For foreman's installation, i just follow the quickstart guide instructions. You will find more information about my configuration on the join file, i don't know if all information required are there but i will be glad to give you what you need.

Regards, Jean.

Do you have a proxy server between you and our repository? Earlier in July we had a security incident and re-signed all of our RPMs (https://groups.google.com/forum/#!topic/foreman-announce/BiIT784Mb7Q), so I'm wondering if something has cached the old version of the RPM.

#2 - 07/28/2014 05:42 AM - jean berghof

Hi Dominic >
I solved this by importing manually the GPG Key this morning, exactly the action explain in your related-post.
So yes probably somehting cached by our proxy server.

Sorry for the inconvenience, Ticket solved.

PS :
Step for me to fix it :
rpm --import http://yum.theforeman.org/RPM-GPG-KEY-foreman
yum clean all

And download the 2 packages creating problem directly from repo :
yum install http://yum.theforeman.org/releases/1.5/el6/x86_64/rubygem-powerbar-1.0.11-7.el6.noarch.rpm
yum install http://yum.theforeman.org/releases/1.5/el6/x86_64/rubygem-little-plugger-1.1.3-17.el6.noarch.rpm
And reste was OK.

Hi Dominic >
I solved this by importing manually the GPG Key this morning, exactly the action explain in your related-post.
So yes probably somehting cached by our proxy server.

Sorry for the inconvenience, Ticket solved.

PS :
Step for me to fix it :
rpm --import http://yum.theforeman.org/RPM-GPG-KEY-foreman
yum clean all
And download the 2 packages creating problem directly from repo :
yum install http://yum.theforeman.org/releases/1.5/el6/x86_64/rubygem-powerbar-1.0.11-7.el6.noarch.rpm
yum install http://yum.theforeman.org/releases/1.5/el6/x86_64/rubygem-little-plugger-1.1.3-17.el6.noarch.rpm
And now i'm fighting with the foreman-installer but i think it will be ok :).
