Bugzilla link: 1122969	Red Hat JIRA:
Pull request:	
Description Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1122969 Description of problem: When I create a new host being deployed to libvirt, I notice that when I depress the size button the text field has focus and is enabled but when I depress the size button again the text button still remains enabled. Is this correct behavior? Steps to Reproduce: 1. create a new host depolying on libvirt 2. under virtual machine tab, modify the storage allocation field by depressing the none/size/full buttons
