

Foreman - Bug #6798

when looking at an eventful host report, clicking the hostname brings you back to the list of reports

Description

Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1123902

Description of problem:

When you go to the Puppet reports page for a system and you search for something like:

```
host = client-11.mydomain.com and eventful = true
```

you get a list of eventful reports. However, if you click on the hostname (eg: client-11.mydomain.com) instead of the item in the "last report" column (eg: 21 minutes ago) you are taken to the list of reports for that host:

<https://satellite.mydomain.com/hosts/client-11.mydomain.com/reports>

While this makes sense in some contexts, in other contexts it does not.

For example:

```
Hosts -> All Hosts -> client-11.mydomain.com -> Reports
```

This shows you a list of reports with no host column.

However, the search box at the top of the page says:

```
host = client-11.mydomain.com
```

If I now add the eventful and hit submit, I get a search results page that has the hostname column. This is unexpected.
