<b>Description</b>		
Setting the Security groups in a compute profile is not working. Once changes are saved, revisiting the Compute Profile settings results in a list of blank security groups. Trying to launch a new host using this profile will result in no rules being added unless you specifically add them at the time of launch. I am running Foreman 1.5.2 and the issue also existed in 1.5.1.

A related behavior to this - it seems that the form doesn't do a pull for the selected security group in the list. When I open a compute profile or load one, the security group first selected in the list doesn't load into the selection form below it.

I'm seeing this problem in Foreman 1.7.3 as well.
