

Katello - Bug #6842

confusing content host identifiers

07/30/2014 10:56 AM - dustin tsang

Status: Closed	
Priority: Normal	
Assignee: dustin tsang	
Category: API	
Target version: Katello 2.0	
Difficulty: easy	Fixed in Releases:
Triaged: Yes	Found in Releases:
Bugzilla link: 1122938	Red Hat JIRA:
Pull request: https://github.com/Katello/katello/pull/4504	
Description	
Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1122938	
Description of problem: content host id and uuid are both used as content host identifiers, what is quite confusing	
Version-Release number of selected component (if applicable): Satellite-6.0.4-RHEL-6-20140716.0-Satellite-x86_64	
How reproducible: always	
Steps to Reproduce: 1. Compare various content host identifiers	
Actual results: 1. hammer interprets uuid as id	
1. hammer content-host list --organization-id 1	
----- ----- ID NAME ----- ----- 49eb6336-03cf-4396-8302-67d3cff2c24e vmware194.englab.brq.redhat.com ...	
2. api documentation for "PUT /katello/api/systems/:id" says: id /required/ UUID of the content host /Value: String	
so, uuid is used as content host id	
3. but the return hash of "PUT /katello/api/systems/:id" API with 'id' set to 'b7dbf416-dd8d-4ab5-95ed-ffe51100ce2c' contains: {..., "id"=>2, ...}	
it contains uuid as well: "uuid"=>"b7dbf416-dd8d-4ab5-95ed-ffe51100ce2c", but it's confusing to update an object with a specific id and getting another id in the response	
Expected results: Hide the 'real' content host id ("id"=>2) from the user as it isn't used anywhere and is only confusing (or drop it completely)	
Additional info: What about returning both - id and uuid keys - with the same value? {..., "id"=>"b7dbf416-dd8d-4ab5-95ed-ffe51100ce2c", "uuid"=>"b7dbf416-dd8d-4ab5-95ed-ffe51100ce2c", ...}
