Pull request: https://github.com/foreman/foreman/pull/1633	
Description When testing idempotency of seed files in automated way, we have found out that best solution would be to have db:seed run twice second time with log of ActiveRecord sql commands. That way we can filter is second run tries to do another updates, inserts, deletes,.... This might be use-full also for debugging purposes.

Revision e09d72ee - 07/31/2014 11:18 AM - Martin Ducar

fixes #6852 - `rake log` added to log ActiveRecord changes to stdout

History

#1 - 07/31/2014 03:33 AM - Dominic Cleal

Note that there's a test in core for idempotency of db:seed which uses an expectation on #save, so this should flag up the problem with a full stack trace when run (test/lib/tasks/seeds_test.rb).

Ok, thanks for the hint than i think this feature is irrelevant

#4 - 07/31/2014 03:38 AM - Dominic Cleal

Nah, after seeing the PR, I think that'll still be useful for all sorts, I'm happy to keep it.

#5 - 07/31/2014 11:02 AM - Dominic Cleal

- Status changed from New to Ready For Testing

- Target version set to 1.7.5

- translation missing: en.field_release set to 10

- Pull request <https://github.com/foreman/foreman/pull/1633> added

- Pull request deleted ()

#6 - 07/31/2014 12:01 PM - Martin Ducar

- Status changed from Ready For Testing to Closed

- % Done changed from 0 to 100
